

Sample disclosure: use of generative AI in psychological assessment

****Introduction****

You are being asked to participate in your healthcare treatment using generative artificial intelligence (AI) technology. This document provides information about the use of generative AI in the context of psychological or neuropsychological assessment. The AI will not be used to form diagnostic impressions or clinical conceptualizations. Please read this information carefully so you can make an informed decision about your participation.

****Purpose and Use of Generative AI****

Generative AI will be used solely to summarize your mental health data, such as medical and mental health history, behavioral observations, existing medical records, and assessment results, to provide a clear overview for your healthcare provider. The AI's role is limited to data summarization or aggregation and will not include making any diagnostic decisions or clinical judgments. Your healthcare provider will use these summaries to aid in reviewing your case but will retain full responsibility for all diagnostic and treatment decisions.

****Potential Benefits****

1. **Efficiency:** AI-generated summaries can help your healthcare provider quickly review your medical information, allowing for more efficient decision-making and more time allocated to clinical conceptualization and treatment recommendations.
2. **Clarity:** Summarized data can present a clearer picture of your medical history, facilitating better-informed medical decisions.

****Potential Risks****

1. **Data privacy:** Using AI involves processing your health data, raising concerns about data security and privacy. Extensive measures are taken to protect your information. For a full disclosure of privacy and security policies, please see the [Reverb Privacy Policy](https://legal.reverbreports.com) at legal.reverbreports.com.
2. **Accuracy:** AI-generated summaries depend on the quality of the data processed. Inaccuracies in data can lead to incorrect summaries, though these will not directly influence clinical decisions. Your clinician will review all AI-generated information for accuracy.

****Your Participation****

Your participation in using generative AI for data summarization is voluntary. You may withdraw your consent at any time without affecting your medical care. Your healthcare provider will oversee all aspects of your treatment, ensuring that AI-generated summaries are used appropriately and do not replace professional medical judgment.
